Subject: cannabis regulation

I respectfully request that the regulations not place a limit on the amount of fresh plants for growers. There are several reasons why this change should be put in place:

1. The market will dictate the limit
2. The fresh raw leaves have incredibly promising effects for cancer and other diseases.
3. The raw fresh plant is only usable for medicine approximately 3 days after harvest.
4. The raw plant leaves have no psychotropic effects (you can't get high.)
5. This plant matter is regarded as unusable and a liability to growers and is therefore destroyed. The plant leaves do not have the same medicinal effect after they are frozen or dried. Therefore it is imperative that the growers and dispensaries are allowed to have a larger amount of fresh leaves available for patients.

I also ask that the amount of flowers growers are allowed to have increase from 5lbs to 50+lbs.

1. The concentrated down medicine commonly referred to as Phoenix Tears requires a large amount of flowers to make. This makes it extremely difficult to have this medicine available for multiple patients with the restrictions on growers or for patients to make their own medicine of this kind.
2. Some of the research that is ongoing in regards to the fresh raw cannabis leaves and the concentrated medicine Phoenix Tears is attached.
3. I have seen firsthand the power of these two types of medicines in the lives of my friends and family. I realize that this is antidotal evidence to you but it is no longer antidotal evidence to those of us who have witnessed the healing potential of this plant. My hope is that Nevada can provide the most progressive and forward thinking regulations for our citizens and those who visit. I can only imagine how much effort you have put into this project. Thank you for your time. This is important for all of us individually and as a nation.

Sincerely,

Angela Harris
